

QA ALIGN Assessment Report

This Playwright system is currently low trust. The recommended starting point is Sprint 3, with modernization following the no_ai path.

Framework: playwright

Trust Level: low

Path Recommendation: no_ai

Recommended Start Sprint: 3

Top Risks

- STATE risk
- LOCATOR risk
- DIAGNOSABILITY risk

Technical Findings

- Brittle locator strategy: Heavy use of weak text selectors and fallback CSS.
- Rerun-dependent debugging: Artifacts are incomplete, failures often rerun to understand.
- Shared mutable state: Tests depend on prior execution order.

Recommended Roadmap

- Start with Sprint 3 for artifact-first diagnosability.
- Move to Sprint 4 to classify and reduce flake patterns.
- Use Sprint 5 to restore state and data control.
- Adopt Sprint 6 once the signal is stable enough to support clearer release decisions.

Immediate Next Steps

- Run a technical signal review against the current framework implementation.
- Validate trust level with real anti-pattern evidence.
- Confirm the no_ai path as the appropriate first modernization route.
